

EDUCATION IN TAJIKISTAN

From ILC Gissar, School #2

1. What basic arguments which surround each question?

Each state should think first of all of rising generation and the problem of formation should stand on the first place. Presently, unfortunately, at many schools there is a shortage of teachers, books, unmodern equipment.

2. How the basic political parties and members of a community approach to the decision of the given problems and questions - what their point of view on the given problem?

We had chosen four main problems surrounded the problem of education and took interviews from different people. Here their thinkings about these questions.

Problem 1: Influence of corruption on formation.

Problem 2: Whether books answer today's requirements?

Problem 3: Reequipment of schools.

Problem 4: How to raise a level of knowledge students?

1 Hidiriva Z, the teacher , schools # 2

Teachers should stop to take bribes and to pay the attention to knowledge of pupils. Today's books very good, full of advice, they help pupils to enrich their outlook. Today we rely only on parents. To raise knowledge of pupils we first of all should interest not only pupils, but also teachers.

2 Tabarova Z, the teacher, school#2

In my opinion now corruption, not only in sphere of formation, everywhere is advanced. Even when the teacher is exacting the pupil does not study, as it is confident, that there will be someone who will put to it an estimation for money. Today's books very much help children and develop their speech. I can't answer to your question on reequipment of schools. To my mind the state should think of it. To improve the knowledge of pupils we

must have close communication with parents, they should come in school and ask about progress of their child. Teachers should carry out the lessons more more interesting

3 *Solieva N, the Employee of Committee on affairs of Youth*

Law enforcement bodies can't any more to struggle with such kind of a crime. To struggle with corruption should only pupils. Today's books very good and they operate well for a life of pupils. But now many pupils do not understand word which have been translated from Russian into Tadjik. Such problems as repair of schools, a computerization of schools have been some times lifted and goes to the decision.

4 *Qurbonova U, housewife*

We should stop corruption from above, that is from higher persons. Now it is very easy for children to study, books are very much compressed and easy for understanding. The problem of reequipment should not be only parental. Of it should think also the government. In my opinion on raising knowledge of students it depends on parents, they should be very exacting to the child. But also the teacher should be exacting.

5 *Safarov Kh., Doctor, City Infectious hospital*

Corruption influences on formation negative. As for books I think in some books we meet today's requirements and it's good for our children. To your question about reequipment of schools my answer is so, I think, that schools should will establish co-operation with sponsors. To improve the knowledge of students first of all we must create of an optimum condition for normal study both in family, and at school.

3. What categories of citizens most mention the given problems.

The problem of formation most of all mentions parents, teachers.

4. How pupils think how it is better to approach to the decision of the given problems ?

In our opinion corruption in sphere of formation can be stopped only joint efforts. In it should be interested first of all both parents and representatives of authorities. At the same time the government should take into account that social status of teachers and teachers in general educational system of Tadjikistan.

Today's books are very interesting, but in them it is a lot of terms which difficult to understand. In this connection it is possible to send the letter to founders of let out books with the request for the appendix of the dictionary to books.

In our opinion, in modernization of schools private persons who are borrowed in sphere of commercial activity can promote.

About how to raise the knowledge of students. We think that first of all, pupils should be interested in study and are exacting to themselves. Second, the teacher should be exacting and to try to carry out lessons more interestingly and is more modern rendered.
